

Scientific Committee Members

In order to prepare the content of the Summit in a relevant way, a Scientific Committee bringing together renowned international food security experts has been set up to contribute - alongside the Steering Committee - towards drafting working documents, approving the Summit agenda, finding relevant speakers from the five continents and identifying decentralised cooperation projects and successful experiences in local food and agriculture development. It is helping to target the specific added value the regional tier can provide in the collective efforts to ensure food security.
